

Our philosophy

The **MARINI IMPIANTI INDUSTRIALI** is a company able to provide specific solutions in design, production and maintenance of devices with high technology contents and also in construction and commissioning of systems or industrial / rail plants.

Design and construction were carried out and certified according to ISO 9001. Railway safety products were certified according to the current European Standards CEI EN 50126,

“ We turn a simple idea into a fruit that bears great technological progress

CEI EN 50128, CEI EN 50129. Products developed safely requires a specific process of verification and validation, so we have to perform analysis of single breakdowns effects, of their occurrence probability, of the consequences of multiple breakdowns, as well as statistical analysis to estimate the lifetime of a specific product. Through that verification and validation process we can totally manage the entire life cycle of a specific product.

Research & Development

Progress is an inexhaustible engine

We gather the customer's needs, and transform them into a product, making use of our "know-how" acquired through years of design for the Industrial, Military and Railway Sector also in accordance with the European Cenelec Safety standards.

Services

Aftersales support

Marini Impianti Industriali has an expressly-trained staff, ready to provide after sales service and maintenance on all products build, for the entire life cycle of the product. We can also assist customers on third-party products.

Industrial Installations

We design and build railway and industrial installations and implement our systems in the field.

Training

We stage special courses to train technical staff to manage and use all the systems developed.

Verification & Validation

We ensure your safety

Marini Impianti Industriali employs a Verification and Validation Team, independent of Research and Development, that carries out specific functions of analysis of the effects of single faults as well as probability of the occurrence and consequences of multiple faults, not only but also internally evaluates the reliability of each product or system ensuring that the European Cenelec Normatives are met.

“ All that merits being done, merits being done well

Products

All that Marini Impianti Industriali can do for you

Marini Impianti is capable of engineering products with high-technological contents within the Railway, Industrial and Military areas of application.

Our core business is represented by electronic and mechanical products and systems, that we design, manufacture and maintain.

Our added value is the aptitude to innovate made possible by highly qualified personnel, able to face new challenges every day.
